ZERO FALSE ALARM

NEW PATENT | 0 FALSE ALARM | OPEN DESIGN | COST-EFFECTIVE | LOW MAINTENANCE | EASY INTEGRATION

24 hours security, 7 days a week,
Easy to install on every fence in any design

هو مركز مراقبة متكامل على مقطورة قابلة للقطر على الطرقات. يرفع صار تلسكوبي من A-Eye in the Sky خمسة أقسام رأس الكاميرات إلى ارتفاع 8.5 أمتار بواسطة ونش كهربائي، ليمنح المشغل رؤية شاملة على الموقع بأكمله خلال دقائق من الوصول. وتثبت دعائم يدوية المنصة، ويتحمل الصاري رياحا تصل سرعتها إلى 117 كم/س.

التغذية بالطاقة ذاتية بالكامل. ثلاثة ألواح شمسية أحادية البلورة بقدرة 435 واط تشحن بنك بطاريات سعته 14,400 واط/ساعة، مع مولد بقدرة 3 كيلوواط ذاتي التشغيل كنسخة احتياطية هجينة. زمن التشغيل النموذجي أربعة أيام عند استهلاك 80 واط دون أي شحن، ويمكن مراقبة كل معطى كهربائي عن بعد من مركز التحكم.

تزود خمس كاميرات PTZ قياسيا داخل صندوق تركيب مانع لتسرب المياه، لتوفر تغطية مستمرة بزاوية 360° مع التسجيل والبث المباشر وتحليلات الفيديو. ومن الوحدات الاختيارية: التصوير الحراري والرادار ومكبر الصوت وكشافات LED وحزمة كشف الطائرات المسييرة D-Dome.

أبرز المزايا

- الانتشار والتشغيل خلال دقائق بواسطة مشغل واحد - دون بنية تحتية أو أعمال مدنية أو تراخيص بناء.
- استقلال طاقي كامل: ألواح شمسية وبنك بطاريات ومولد هجين.
- مراقبة وتحكم عن بعد بالكاميرات ومنظومة الطاقة معا.
- قابلة للنقل بالكامل - منصة واحدة تخدم عدة مواقع خلال دورة حياتها.
- استخدامات نموذجية: مواقع البناء والحدود والزراعة والموانئ وساحات الخدمات اللوجستية والفعاليات وتأمين الحشود والمواقع المؤقتة والاستجابة للطوارئ.

بنيت المقطورة وفق المعيار الأميركي بخطاف كروي وأربع دعامات يدوية، وتصل إلى الموقع جاهزة للانتشار. وجميع المعدات - البطاريات والمنظمات والشاحن والمولد - مركبة داخل حيز مانع لتسرب المياه ضمن هيكل المقطورة، فلا حاجة إلى خزانة خارجية أو أعمال كهربائية في الموقع.

المواصفات الفنية - DF3P-01A

ارتفاع الصاري / الأقسام	8.5 م / 5 أقسام
مقاومة الرياح	117 كم/س
المقطورة	معيار أمريكي، خطاف كروي
الوزن	1400 كغ
الأبعاد	12000 × 3400 × 3200 مم
منظومة الكاميرات	5 كاميرات PTZ
صندوق التركيب	مانع لتسرب المياه
الضمان	سنتين

الألواح الشمسية	3 × 435W
البطاريات	8 × 150Ah DC12V (14,400Wh)
المنظم	Victron, MPPT, Cerbo GX
زمن الشحن	9.3 ساعة
زمن التشغيل	4 أيام عند 80 واط
جهد النظام	DC48V
الشاحن	2.5KW, AC220V
مولد احتياطي	3KW، تشغيل ذاتي

المراقبة والإنذار من الجيل الجديد - يحول أي مركبة دورية أو قيادة أو خدمة إلى مركز مراقبة متنقل. ويركب - NOA على السقف رأس مثبت ثنائي الحساس يجمع كاميرا نهائية بعيدة المدى وقناة حرارية، ويدار من داخل المركبة أو عن بعد من مركز التحكم.

تتولى الذكاء الاصطناعي الكشف والتصنيف والتتبع المستمر للأشخاص والمركبات والأهداف الجوية، فينبه الطاقم إلى ما يهم فعلا بدل مراقبة الشاشة. وتبث الصورة وبيانات الهدف مباشرة إلى مركز التحكم، لتحصل القيادة على الصورة ذاتها المتاحة للطاقم في الميدان.

يشحن النظام كاملا في حقيبة نقل مقواة واحدة. ولا يستغرق تركيبه على مركبة أخرى سوى دقائق دون أي تعديل دائم، بحيث يخدم نظام واحد أسطولا كاملا وفق مهمة كل يوم.

أبرز المزايا

- ◀ وعي ظرفي بزاوية 360° من مركبة ثابتة أو متحركة.
- ◀ كشف وتصنيف وتتبع بالذكاء الاصطناعي - نهارا وليلا.
- ◀ تغطية تهديدات متعددة المجالات: الأرض والمحيط والمجال الجوي المنخفض.
- ◀ يعمل من تغذية المركبة دون أي تعديل دائم.
- ◀ انتشار من حقيبة واحدة - قابل للنقل بين المركبات خلال دقائق.

تشكل الطائرات المسييرة اليوم التهديد الأسرع نموا على المطارات والقواعد العسكرية والبنى التحتية الحيوية والمنشآت الصناعية والملاعب والتجمعات الكبرى. فهي رخيصة وهادئة وسهلة الاقتناء وشبه غير مرئية لأنظمة حماية المحيط التقليدية التي لم تصمم يوما للنظر إلى الأعلى.

نظام ذكاء اصطناعي يرتبط بكاميرات المراقبة الموجودة لديكم أصلا ويحولها إلى منظومة كشف D-Dome مبكر للطائرات المسييرة. فما إن تخترق طائرة مسيرة مجالكم الجوي حتى تعلموا بها - قبل وصولها. ولا حاجة إلى رادار مخصص أو حقل حساسات جديد أو ترخيص تردد، ويمكن إضافة النظام إلى منظومة كاميرات ثابتة قائمة أو إلى أي مقطورة A-Eye.

ماذا يفعل D-Dome

- يكشف - تمييز مبكر ودقيق للطائرات المسييرة المشبوهة عن بعد (حتى 3 كم).
- ينذر - إنذارات فورية في الزمن الحقيقي لعناصر الأمن ومركز القيادة، قبل الاختراق.
- يعرض - تتبع بصري مباشر وتحقق من الهدف على جدار الفيديو القائم.
- يحمي - يعزز الدفاع المحيطي باستجابة سريعة وذكية وموثقة بالكامل.
- مناسب للمطارات والقواعد العسكرية والمنشآت الاستراتيجية والبنى التحتية الحيوية والملاعب والفعاليات الكبرى.

مضاد للطائرات المسييرة

اكشف. تحقق. استجب.

يجمع حل D-Fence المضاد للطائرات المسييرة بين الكشف والتحقق والاستجابة في حزمة متنقلة واحدة. فمقطورة A-Eye in the Sky تحمل الحساسات، ويتولى D-Dome الكشف بالذكاء الاصطناعي عبر الكاميرات نفسها، وتكمل وحدة مخصصة السلسلة باستجابة عملياتية.

المنظومة بأكملها ذاتية التشغيل: تعمل بالطاقة الشمسية ومسنودة بالبطاريات، ولها وصلة اتصال خاصة بها، وينشرها مشغل واحد خلال دقائق أينما اقتضت المهمة. فلا شيء يحتاج إلى بناء أو تمديد أو ترخيص في الموقع.

مزايا المنظومة

- كشف مبكر للطائرات المسييرة المشبوهة على مدى بعيد.
- إنذار فوري لعناصر الأمن ومركز القيادة.
- تشغيل ذاتي على مدار الساعة بالطاقة الشمسية.
- تحمل الظروف الجوية والتضاريس القاسية.
- تحكم ومراقبة عن بعد في كل وقت.
- انتشار مرن في أي بيئة عملياتية.
- تغطية توثيق وتتبع بزاوية 360°.
- مناسب للحدود والتجمعات الكبرى والمعسكرات والمواقع الحيوية.

وحدات إضافية

يمكن تركيبها على أي مقطورة A-Eye in the Sky

صممت مقطورة A-Eye in the Sky كمنصة معيارية. فإلى جانب كاميرات PTZ الخمس القياسية، يمكن إضافة وحدات مخصصة وفق طبيعة المهمة، دون أي تغيير في بنية المقطورة ودون الحاجة إلى انتشار ميداني إضافي.

كاميرا حرارية

قناة حرارية لكشف الأشخاص والمركبات في الظلام الدامس والدخان والضباب والأحوال الجوية القاسية. تكمل كاميرات النهار وتتيح التمييز على مسافات بعيدة دون أي مصدر إضاءة، على مدار الساعة.

مضاد للطائرات المسيرة

وحدة مخصصة لمواجهة الطائرات المسيرة، متكاملة مع نظام الكشف D-Dome. وبعد الكشف المبكر والتحقق البصري، تتيح الوحدة استجابة عملياتية فورية في المجال الجوي للموقع.

مسرد الأنظمة

أنظمة الكشف والحماية من D-Fence

تستند جميع فصول هذا الكتاب إلى عائلة الأنظمة الموضحة أدناه. لكل نظام تقنيته الخاصة، غير أنها جميعا ترتبط بمركز التحكم المحوسب نفسه، وتشترك في صيانة دنيا وصفر إشعاع وصفر إنذارات كاذبة تقريبا.

D-Taut Wire

نظام كشف اختراق محيطي بالأسلاك المشدودة

نظام الأسلاك المشدودة هو حل الأمن الأعلى مستوى لدى D-Fence لحماية المواقع من المتسللين. وهو يجمع بين حاجز مادي ومنظومة تحكم إلكترونية متقدمة تحدد الموقع الدقيق لأي محاولة اختراق. وتضمن حساسات مقواة مصممة خصيصا ووحدات معالجة رقمية فريدة حساسية ثابتة في جميع الظروف البيئية مع انعدام شبه تام للإنذارات الكاذبة.

D-Corative

سياج إلكتروني تزييني

سياج إلكتروني ذكي وتزييني واقتصادي يندمج بسهولة مع أي سياج معدني قائم عبر أعمدة حساسات مخصصة. ويعتمد على تقنية حساسات متقدمة توفر أداءا عاليا وحماية متينة من الاختراق، مع اندماج طبيعي في المحيط الأخضر.

D-Pressure Strip

نظام حماية الجدران والأسوار

يستخدم نظام حماية الجدران من D-Fence، بما يتضمنه من مقاييس إجهاد مدمجة، لردع وكشف المتسللين الذين يحاولون تسلق الجدران الخرسانية أو الخشبية، أو أي نوع من الأسوار - معدنية أو خشبية أو بلاستيكية - أو البوابات. وعند وقوع إنذار يبلغ مركز التحكم المحوسب فوراً.

D-Deck

نظام كشف الاختراق على الأسطح

طور نظام D-Deck لحماية الأسطح. ويركب بصورة دائمة أو مؤقتة على الشرفات والممرات والتراسات والأروقة وسائر المساحات الخارجية، فيكشف أي تغير في الضغط ناتج عن الوطء أو التسلق مع بقائه غير مرئي. ويناسب أي نوع من مواد الأرضيات.

D-Fence 4 U

نظام منزلي بخاصية التركيب والتشغيل

براءة اختراع جديدة تغير قواعد اللعبة: تأمين الممتلكات بأناقة، مع تركيب سهل وكفاءة لا تقبل المساومة. D-FENCE 4 U منظومة كشف اختراق محيطي تعمل بمبدأ التركيب والتشغيل، مبنية من شريط يضم حساسات الضغط من D-Fence وكابلات التغذية والاتصال. ويركب أعلى أي بنية مادية - بلوك أو معدن أو خشب أو بلاستيك أو زجاج أو أرضية - ويوفر كشفاً فورياً ودقيقاً بمعدل إنذارات كاذبة منخفض جداً.

D-Glass

نظام كشف الاختراق على الزجاج

يتيح D-Glass دمج كشف الاختراق في الأسوار والجدران الزجاجية. فبريط الألواح الزجاجية بحساس الإجهاد من D-Fence داخل عمود الحساس، أو بدمج الحساسات في أعلى السياج أو الجدار الزجاجي، يتحول السياج إلى منظومة إلكترونية ذكية لكشف الاختراق المحيطي.

Electronic Welded MESH

سياج شبكي ملحوم إلكتروني

يتكامل حساس الإجهاد من D-Fence مع أي سياج شبكي ملحوم ويحوّله إلى سياج كاشف. ويركب الحساس بين ألواح الشبك بطريقة معيارية وسهلة. وبينما تركب معظم الأنظمة الكاشفة كعنصر إضافي على السياج، يشكل نظام D-Fence جزءاً أصيلاً يحمل ألواح السياج نفسها.

Electronic Field Fence

سياج حقلي إلكتروني

يستند النظام إلى أسوار الحقول المعروفة والاقتصادية، وهو سهل وسريع جداً في الانتشار والتركيب على أي ارتفاع مطلوب دون مهارات أو أدوات خاصة. ويمكن تركيبه على أسوار أو جدران قائمة كتحديث، أو كنظام مستقل حيث لا يوجد سياج.

DF-2100

كونسرتينا إلكترونية بأسلاك شفرية

كونسرتينا من الأسلاك
الشفرية مقترنة بكشف
إلكتروني للاختراق. توفر حاجزا
ماديا يصعب اختراقه وتحديد
دقيقا لموضع المحاولة، مع إطلاق
إنذار في مركز التحكم يبين
النقطة بالضبط، مما يمنح قوات
الأمن وقتا للاستجابة والوصول
سريعا.

D-Bolt

نظام البرغي الإلكتروني

يحمي نظام D-Bolt المعدات
القيمة والحساسية من السرقة.
فحساسات الإجهاد مدمجة في براغ
ومسامير بأقطار مختلفة ومربوطة
بوحدة تحكم إلكترونية مزودة
بمرسل لاسلكي. وأي محاولة
لفتح البرغي أو إرخائه تطلق
تنبيهها وترسل موقعه.

CCC

مركز التحكم المحوسب

يجمع مركز التحكم المحوسب من بيانات الميدان ويحللها D-Fence ويعرضها في الزمن الحقيقي على جميع الجهات المعنية في المنظومة. وقد صمم لإدارة الروتين اليومي وحالات الأزمات على حد سواء، فيمنح صناع القرار ما يحتاجونه لاتخاذ قرارات سريعة ومستنيرة، ويتحكم بمجمل تشغيل المحيط بيسر.

The Technology

D-Fence Pressure Sensor

- Trigger alarm when pressure detected is over the pre-set activation weight
- Self adjustment to the environment every second
- Durable for 15+ years outdoor usage

ZERO false alarm

performance

Weight of bird: 0.1-0.5kg	Weight of cat: 4.5kg	Alarm Activation Weight: 20-10kg	Minimum weight of a man: 55kg
Force of swaying plant: 0.5-3kg	Wind-load under typhoon: 4-15kg		

لا يطلق الحساس الإنذار إلا عندما يتجاوز الضغط المقاس وزن التفعيل المحدد مسبقا (1020 كغ). وبعبارة النظام نفسه مع بيئته كل ثانية، لذا فإن الطيور (0.1-1.5 كغ) والقطط (4.5 كغ) والنباتات المتمايلة (0.5-3 كغ) بل وحتى حمل الرياح في الأعاصير (4-15 كغ) لا تطلق أي إنذار، في حين يكشف الوزن الأدنى للإنسان (55 كغ) فوراً. متانة تتجاوز 15 عاماً في الاستخدام الخارجي.

شريط الضغط D-Pressure Strip

يركب الشريط أعلى الجدران والأسوار والدرازين من أي مادة - خرسانة أو حجر أو خشب أو معدن أو زجاج - ويضم حساسات الضغط إلى جانب كابلات التغذية والاتصال. وأي محاولة تسلق أو اتكاء تطلق إنذاراً فوراً مع تحديد دقيق لموقع الحدث.

Access Routes

Based on the now well-known and field tested D-Pressure Strip PIDS, D-Fence has developed the D-Truck Strip Perimeter Intrusion Detection System to provide accurate and reliable protection for roads and access routes.

The D-Truck Strip PIDS can be mobile or fixed, and provides detection and protection against unauthorized vehicles in access roads, access routes and in entry ways to any site, including those remotely located like agricultural fields, oil and water wells, telecommunication stations, etc.

A mobile system can be deployed in minutes, can be visible or hidden and can send the alarms by cable connection and/or wirelessly. A fixed system can also be visible or hidden.

Agriculture Security

Modern Agriculture is in constant development, both in the vegetable field and in the animal field and the technology. This fast development causes also an increase in the security needs from year to year, either in the protection of fields, to protect valuable crops, or the protection of animal growing installations like cowsheds, stables, growing farms, etc., and additionally, the protection of agro mechanical equipment, packing plants, mechanization, etc.

D-Fence has developed a wide range of security systems for the agricultural field, including mobile systems for seasonal deployment that are functional for the protection of the fields, farms and installations. The systems are designed to avoid any false alarms that could be caused by animals or by the agricultural crops and to stand any extreme weather conditions.

Systems for Agriculture Security:

1. D-Taut Wire Perimeter Intrusion Detection System
2. Electronic Field Fence Perimeter Intrusion Detection System
3. DF-2100 Electronic Razor Wire Concertina
4. Electronic Welded Mesh Perimeter Intrusion Detection System
5. D-Bolt Security System
6. D-Ground Perimeter Intrusion Detection System
7. Computerized Control Center

Agriculture Security

Airport Security

The security and protection of airports is one of the most challenging subjects for Security Experts around the world. The combination of technology and personnel in a noisy and dynamic environment constitutes a very big technological challenge because of the need to create systems that integrate multiple technologies, in several security circles. D-Fence has developed and created the First Circle, a very important circle that encloses the airport along very big lengths. The systems withstand harsh environmental conditions as well as the noise from airplanes, shock waves, vibrations and tremors, RF transmission, etc. The experience accumulated in this field and the products developed by D-Fence can be used by architects and security integrators with the objective to provide protection and security to airports around the world.

Systems for Airport Security:

1. D-Taut Wire Perimeter Intrusion Detection System
2. D-Corative Perimeter Intrusion Detection System
3. D-Pressure Strip Intrusion Detection System
4. D-Deck Intrusion Detection System
5. D-Step Intrusion Detection System
6. DF-2100 Electronic Concertina Intrusion Detection System
7. Electronic Field Fence Perimeter Intrusion Detection System
8. Electronic Welded Mesh Perimeter Intrusion Detection System
9. D-Bolt Security System
10. D-Ground Security System
11. Computerized Control Center

Airport Security

Antenna & Telecomm Station Security

The issue of providing protection for remotely located installations, big or small, like Cellular Antennae, civil or military Telecommunication Stations, Electrical towers and posts, etc., that are frequently exposed to vandalism by hostile elements, terrorist activities or criminal elements. Disabling or damaging them can cause heavy damages like communication blackouts or disruption in the electricity supply as well as damages on a national political level.

D-Fence has developed security systems that are vandalism proof in several levels, that include perimeter protection for these installations in several "security circles", according to the level of threat. The systems include electronic fences, electronic bolts and anti-vandalism gates.

Systems for Antennae and Telecommunication station Security:

1. D-Taut Wire Perimeter Intrusion Detection System
2. Electronic Field Fence Perimeter Intrusion Detection System
3. DF-2100 Electronic Razor Wire Concertina
4. Electronic Welded Mesh Perimeter Intrusion Detection System
5. D-Bolt Security System
6. D-Ground Perimeter Intrusion Detection System
7. Computerized Control Center

Banks, Financial Institutions & Vaults

Banks and Financial Institutions, in general, have today a high level of security. D-Fence has systems that can improve the existing security infrastructure, creating a double layer of security, including increased protection for vaults and mandatory access ways, protection against excavations and tunnels, and protection against breaking in through walls.

Systems for Banks, Financial Institutions and Vaults:

1. D-Taut Wire Perimeter Intrusion Detection System
2. D-Corative Perimeter Intrusion Detection System
3. D-Pressure Strip Intrusion Detection System
4. D-Deck Intrusion Detection System
5. D-Step Intrusion Detection System
6. DF-2100 Electronic Concertina Security System
7. Electronic Field Fence Perimeter Intrusion Detection System
8. Electronic Welded Mesh Perimeter Intrusion Detection System
9. D-Bolt Security System
10. D-Ground Perimeter Intrusion Detection System
11. Computerized Control Center

Buildings, High-rises, Office & Apartment Towers

The massive transition around the word to high-rises and sky scrapers, including luxury buildings, brings with it new security threats which in most cases is addressed by security guards at the entrances and lobbies of the buildings but not inside the apartments and/or terraces. The threat of an intrusion and the passage between balconies and terraces led D-Fence to the design and development of quality decorative systems and products that don't create false alarms and that can be integrated with the architectural design with an "Open Design" concept, providing maximum security to the residents and the property owners.

Systems for Buildings, High-rises, office and apartment towers:

1. D-Taut Wire Perimeter Intrusion Detection System
2. D-Corative Perimeter Intrusion Detection System
3. D-Pressure Strip Intrusion Detection System
4. D-Deck Intrusion Detection System
5. D-Step Intrusion Detection System
6. Electronic Field Fence Perimeter Intrusion Detection System
7. Electronic Welded Mesh Perimeter Intrusion Detection System
8. D-Bolt Security System
9. Computerized Control Center

Camping Sites

The peace of mind of vacationers in holiday camping sites is very often disturbed by intruders that can very easily gain access to them with the intention to steal or cause damage to their property or even to cause physical damage to them.

By enclosing them with an electronic perimeter system that provides early indication of any intrusion attempt, the sites can be easily controlled to make sure no unauthorized persons gain access to them. D-Fence has developed electronic perimeter intrusion detection systems that completely blend with the environment of the sites, cause no interference with their nature, and work around the clock with zero false alarms.

Systems for Camping Sites:

1. D-Taut Wire Perimeter Intrusion Detection System
2. D-Corative Perimeter Intrusion Detection System
3. D-Pressure Strip Intrusion Detection System
4. Electronic Field Fence Perimeter Intrusion Detection System
5. Electronic Welded Mesh Perimeter Intrusion Detection System
6. D-Bolt Security System
7. D-Ground Security System
8. Computerized Control Center

Command & Control Center

D-Fence's Computerized Control Center (CCC) is used for gathering, analyzing and presenting data from the system's field assemblies to the security officer on site. The CCC also conducts automatic self-tests of the system and it controls the standard operation of the perimeter system. The CCC software can run on D-Fence's hard bodied computer or can run on any PC.

Solar Farms & Solar Panels

The growing demand for alternative energy sources has brought, in the last few years, great developments in the solar panel industry that are being installed both on the ground or on top of structures. The enemies of this industry are vandalism and crime to which the equipment is exposed. To protect these assets, D-Fence has developed a series of applications of its systems, which provide safe, reliable and efficient protection

Systems for Solar Farms and Solar Panels:

1. D-Taut Wire Perimeter Intrusion Detection System
2. D-Corative Perimeter Intrusion Detection System
3. D-Pressure Strip Intrusion Detection System
4. D-Deck Intrusion Detection System
5. D-Step Intrusion Detection System
6. Electronic Field Fence Perimeter Intrusion Detection System
7. Electronic Welded Mesh Perimeter Intrusion Detection System
8. D-Bolt Security System
9. D-Ground Security System
10. Computerized Control Center

Water Passages & Air Vents

Water Passages and Air Vents can be defined as weak points in the security and protection circles of any site. D-Fence has developed the ultimate and most technologically advanced security solution to provide reliable security for water passages, drain pipes and air vents, which integrate perfectly within the protection circles.

Systems for Water Passages and Air Vents' Security:

1. D-Corative Perimeter Intrusion Detection System
2. Electronic Field Fence Perimeter Intrusion Detection System
3. DF-2100 Electronic Razor Wire Concertina
4. Electronic Welded Mesh Perimeter Intrusion Detection System
5. D-Bolt Security System
6. Computerized Control Center

Factories & Industrial Installations

Around most factories and industrial installations, the perimeter fences that have been installed were chosen by architects or other designers, according to the nature of the region or even the country where they are located. Most of these perimeter fences are exposed and can be very easily bypassed. For this purpose, D-Fence has developed the "Upgrade" system, that allows implementing in a very simple, easy and in a modular way our unique electronic fencing systems into the existing fences, using an "Open Design" concept and allowing to improve the security level in an ultimate way, while completely integrating into the existing infrastructure.

Systems for Factories and Industrial Installations:

1. D-Taut Wire Perimeter Intrusion Detection System
2. D-Corative Perimeter Intrusion Detection System
3. D-Pressure Strip Intrusion Detection System
4. D-Deck Intrusion Detection System
5. D-Step Intrusion Detection System
6. DF-2100 Electronic Concertina Intrusion Detection System
7. Electronic Field Fence Perimeter Intrusion Detection System
8. Electronic Welded Mesh Perimeter Intrusion Detection System
9. D-Bolt Security System
10. Computerized Control Center

Patent Product

GREEN SECURITY REVOLUTION

Living next to an electric fence is like having the radiation of multiple smart phones next to your family at all times. D-Fence Green Security Revolution turns your electric fence to a smart fence with Zero false alarm and no health hazard. D-Fence is proud to launch the Green Security Revolution, our newest development that allows turning any Electric Shock Fence into a Green Electronic Fence, without any radiation, without High Voltage of 10,000 Volts, without any false alarms, an exclusive patent of D-Fence Electronic fencing and Security Systems Ltd.

Systems for Green Security Revolution:

1. D-Taut Wire Perimeter Intrusion Detection System
2. D-Corative Perimeter Intrusion Detection System
3. D-Pressure Strip Perimeter Intrusion Detection System
4. D-Deck Intrusion Detection System
5. D-Step Intrusion Detection System
6. Electronic Field Fence Perimeter Intrusion Detection System
7. Electronic Welded Mesh Perimeter Intrusion Detection System
8. Computerized Control Center

Patent Product

GREEN SECURITY REVOLUTION

Highways, Gas Stations & Rest Areas

Highways, Gas Stations and Rest Areas, as well as roadside restaurants have become very popular in many countries around the world, and consequently the focus of crime, theft and vandalism. By making use of the systems of the Upgrade series, D-Fence has been able to turn these areas into safer and more comfortable places.

Systems for Highways, Gas Stations and Rest Areas:

1. D-Taut Wire Perimeter Intrusion Detection System
2. D-Corative Perimeter Intrusion Detection System
3. D-Pressure Strip Intrusion Detection System
4. D-Deck Intrusion Detection System
5. D-Step Intrusion Detection System
6. Electronic Field Fence Perimeter Intrusion Detection System
7. Electronic Welded Mesh Perimeter Intrusion Detection System
8. D-Bolt Security System
9. Computerized Control Center

Hospitals & Medical Centers

Hospitals, Clinics and Medical Centers require territorial security for the complex and complete control over unauthorized persons that can penetrate the compounds through the perimeter fence, and also in terms of sensitive areas like drug storage areas, generator areas, machinery rooms, Oxygen tanks, etc. For each one of these subjects, D-Fence has created solutions that can integrate into the security means, both in the architectural and in the functional aspects, in the required zone.

Systems for Hospitals and Medical Centers:

1. D-Taut Wire Perimeter Intrusion Detection System
2. D-Corative Perimeter Intrusion Detection System
3. D-Pressure Strip Intrusion Detection System
4. D-Deck Intrusion Detection System
5. D-Step Intrusion Detection System
6. DF-2100 Electronic Concertina Security System
7. Electronic Field Fence Perimeter Intrusion Detection System
8. Electronic Welded Mesh Perimeter Intrusion Detection System
9. D-Bolt Security System
10. D-Ground Perimeter Intrusion Detection System
11. Computerized Control Center

Integration

D-Fence, additionally to providing its own systems and electronic components, has the capability to integrate them into any existing or external system like CCTV Cameras, Access Control Systems, Security Lights, Control Centers, Alarm Panels, etc. using both RS232 and RS485 protocols. D-Fence has the capability to build a complete system, or to add and integrate it into any type existing ones.

Mechanical Safety

The technological developments, the robotics and the increased use in lasers created a need to protect the mechanical equipment and the employees that operate the systems. For this purpose, D-Fence has designed modular security systems that are embedded in the existing general security and protection systems that have been set up in the installation. Any attempt to climb or dismantle them or any attempt by an unauthorized person to bypass them will generate an alarm and/or will cause the machine to shut off.

Systems for Green Mechanical Safety:

1. D-Pressure Strip Perimeter Intrusion Detection System
2. D-Deck Intrusion Detection System
3. D-Step Intrusion Detection System
4. Electronic Welded Mesh Perimeter Intrusion Detection System
5. Computerized Control Center

Taut Wire

Military Installations

Military and Intelligence installations have become in the last years targets for intrusion and penetration, both on the intelligence and the hostile action levels. To provide adequate security for these installations, High Security level systems are required, systems that are built by no less than three security rings that include electronic, intelligent fences, security cameras, and a Command and Control Center. D-Fence has developed systems that give answer to these needs and requirements, that can be installed and that work perfectly in the most extreme conditions like desert environments, areas with extremely high and/or extremely low temperatures, etc. The systems are built with dual connections so that even sabotaging the communication and power cable won't stop the system from working, and will provide response to the new terror threats by preventing intrusions from unauthorized people and a wide range of protection and security possibilities according to the needs of each installation.

Systems for Military Installations:

1. D-Taut Wire Perimeter Intrusion Detection System
2. D-Pressure Strip Intrusion Detection System
3. D-Deck Intrusion Detection System
4. D-Step Intrusion Detection System
5. DF-2100 Electronic Concertina Intrusion Detection System
6. Electronic Field Fence Perimeter Intrusion Detection System
7. Electronic Welded Mesh Perimeter Intrusion Detection System
8. D-Bolt Security System
9. D-Ground Security System
10. Computerized Control Center

Military Installations, Borders & Frontiers

The protection of borders and frontiers is a subject that today many countries around the world have to deal with, being either because of territorial disputes, conflicts and wars, infiltrations, smuggling (of drugs, equipment, etc.), refugees, etc. For this risks and threats, D-Fence has developed a series of systems to allow the relevant bodies to deal with all the above threats. We are talking about modular systems that can be installed according to the relativity of the threat.

Systems for Borders and Frontiers:

1. D-Taut Wire Perimeter Intrusion Detection System
2. Electronic Field Fence Perimeter Intrusion Detection System
3. DF-2100 Electronic Razor Wire Concertina
4. Electronic Welded Mesh Perimeter Intrusion Detection System
5. D-Bolt Security System
6. D-Ground Perimeter Intrusion Detection System
7. Computerized Control Center

Military Installations, Borders & Frontiers

Military Installations, Borders & Frontiers

Mines

The protection of mines requires first and foremost control over very big areas of territory, control over the infrastructure, the mechanical equipment and the workforce personnel. The protection suit that D-Fence has built for the mines includes integration between tens of systems, related to each other, and provide response with command and control over the large areas, according to the client's needs. The product package described here is a part of this puzzle, optimized after a risk assessment that D-Fence has developed and assembles for the protection of mines.

Systems for Mines:

1. D-Taut Wire Perimeter Intrusion Detection System
2. DF-2100 Electronic Concertina Intrusion Detection System
3. Electronic Field Fence Perimeter Intrusion Detection System
4. D-Bolt Security System
5. Computerized Control Center

Museums

The protection of artworks, paintings, sculptures and heritage values both on a national and on a private level is a mission by itself. The high level requests from the governments and from the security forces led D-Fence to create unique systems that are fit for the task both from the functionality and also from the architectural aspects. The systems are invisible and won't interfere with the existing environment (these are modular systems), and they provide answers to sophisticated intrusion and theft attempts, with early warning. D-Fence has developed a wide range of systems for this specific purpose that are presented to architects, security officers and art treasurers to provide maximum protection to the artworks.

Systems for Museums:

1. D-Taut Wire Perimeter Intrusion Detection System
2. D-Corative Perimeter Intrusion Detection System
3. D-Pressure Strip Intrusion Detection System
4. D-Deck Intrusion Detection System
5. D-Step Intrusion Detection System
6. Electronic Field Fence Perimeter Intrusion Detection System
7. Electronic Welded Mesh Perimeter Intrusion Detection System
8. D-Bolt Security System
9. D-Ground Security System
10. Computerized Control Center

Offshore Oil & Gas Platforms

The task to provide security and protection for offshore oil and gas platforms, which recently are under constant terror and other security threats, gave rise to the need to find creative solutions because of their location deep in areas with high corrosion and extremely harsh environmental conditions. In order to prevent approaching or infiltrations attempts to the platform by boats, or attempts to damage or to gain access to the physical structure of the platform, D-Fence has developed a protection enclosure that provides the solutions that will allow the decision makers to make use of them according to the level of threats.

Systems for Offshore Oil and Gas Platforms:

1. D-Taut Wire Perimeter Intrusion Detection System
2. D-Pressure Strip Intrusion Detection System
3. D-Deck Intrusion Detection System
4. D-Step Intrusion Detection System
5. DF-2100 Electronic Concertina Intrusion Detection System
6. Electronic Field Fence Perimeter Intrusion Detection System
7. D-Bolt Security System
8. Computerized Control Center

Playgrounds

Playgrounds and parks, which usually attract thousands of families and especially small children, are places that are often surrounded by regular fences that don't provide any indication of intrusions by non-authorized persons, and can very easily be bypassed providing non-restricted access to the site.

For this purpose D-Fence has developed the D-Corative and the Electronic Welded Mesh systems, among others, that supply a technological addition to the existing fences turning them into advanced electronic warning systems that can additionally be connected to CCTV cameras.

Systems for Playgrounds:

1. D-Taut Wire Perimeter Intrusion Detection System
2. D-Corative Perimeter Intrusion Detection System
3. D-Pressure Strip Intrusion Detection System
4. Electronic Field Fence Perimeter Intrusion Detection System
5. Electronic Welded Mesh Perimeter Intrusion Detection System
6. D-Bolt Security System
7. D-Ground Security System
8. Computerized Control Center

Power Generation Facilities stations & sub-stations

The protection of Power Generation Facilities, Stations and Sub-Stations is characterized by the search for systems that are explosion-proof while providing both deterrence and early alarm against intrusions. Since the great majority of these types of installations are already protected one way or another, D-Fence has developed several protection and detection systems designed to Upgrade any existing means already installed into smart intrusion detection systems with zero false alarms.

The systems presented below can be installed independently or can be combined into existing security means and can also integrate with additional existing and new systems by way of a sophisticated control interface that, in combination with D-Fence's unique sensors, create a safe and secure system that provides protection to the wide range of installations.

Systems for Power Generation Facilities:

1. D-Taut Wire Perimeter Intrusion Detection System
2. D-Pressure Strip Intrusion Detection System
3. Electronic Field Fence Perimeter Intrusion Detection System
4. DF-2100 Electronic Razor Wire Concertina
5. Electronic Welded Mesh Perimeter Intrusion Detection System
6. D-Bolt Security System
7. D-Ground Perimeter Intrusion Detection System
8. Computerized Control Center

Prisons & Jails

The subject of detention and incarceration has become, with the years passing, a global problem. From Federal to privately operated prisons, as well as detention centers for refugees, all of them require the most strict security measures. D-Fence has developed systems that provide a complete response, both in terms of upgrading old and obsolete systems, and in terms of providing an environment that allows for complete protection and for a sense of security without compromises. We are talking about systems that are decorative, aesthetic, eco-friendly, that are not electrical, yet provide the highest level of security. These systems present a change in the architectural concept of prisons and jails, and provide a more pleasant feeling without a compromise in the security or the detection levels.

Systems for Prisons and Jails:

1. D-Taut Wire Perimeter Intrusion Detection System
2. D-Corative Perimeter Intrusion Detection System
3. D-Pressure Strip Intrusion Detection System
4. D-Deck Intrusion Detection System
5. D-Step Intrusion Detection System
6. DF-2100 Electronic Concertina Security System
7. Electronic Field Fence Perimeter Intrusion Detection System
8. Electronic Welded Mesh Perimeter Intrusion Detection System
9. D-Bolt Security System
10. D-Ground Perimeter Intrusion Detection System
11. Computerized Control Center

Prisons & Jails

Private Villas, Houses & Homes

D-Fence has designed and developed a unique series of perimeter protection systems for Condominiums, Private Villas, Houses and Homes, that include the D-Corative, the D-Pressure Strip, the D-Taut Wire, the Green Revolution System and others. Years of experiencing systems with a huge number of false alarms and systems that don't provide complete security raised in D-Fence the challenge to develop security systems for private homes that can tackle common inconveniences like the ones caused by growing vegetation, small animals, weather conditions and urban environment. D-Fence has developed quiet and efficient systems that are not affected by these factors, work around the clock, provide maximum security with no false alarms and with almost no maintenance, and help create a safe environment with no health hazards. One of these systems is the Green Security Revolution, that allows being close to a security system with no fear of harm caused by an electric shock or radiation or injury to family members and pets or animals. Additionally, the use of these systems clears the owner/resident of the house and the authorities of the responsibility of any harm that can be caused to any trespasser. the systems we present can be upgraded or re-designed based on the existing blueprints and diagrams.

& Homes - D-Step

Private Villas, Houses & Homes - Pressure Strip

Protection of Posts

D-Fence has developed a modular security system based on the "open-design" concept to provide protection for posts that hold sensitive and expensive equipment like CCTV cameras, radio and cellular antennae, electronic boards, etc.

An early alarm, with precise information and location, about any attempt to steal or damage the equipment on the post is received directly at the monitoring center and/or to a smartphone or tablet, giving the security forces time to react.

Systems for the protection of posts:

1. D-Corative Perimeter Intrusion Detection System
2. Electronic Field Fence Perimeter Intrusion Detection System
3. DF-2100 Electronic Razor Wire Concertina
4. Electronic Welded Mesh Perimeter Intrusion Detection System
5. D-Bolt Security System
6. Computerized Control Center

Resorts & Hotels

The terror attacks against hotels around the world in the last few years compelled the security forces to seek and find solutions for the security of hotels and resorts. D-Fence has developed a series of perimeter protection systems, designed to provide early warning about any intrusion by unauthorized people to the hotel/resort complex and the open areas that surround them, immediately with the intrusion attempt to the area. The special systems allow for early detection and will work in complete integration with already existing systems at the site and with the security procedures of the hotel.

Systems for Resorts and Hotels:

1. D-Taut Wire Perimeter Intrusion Detection System
2. D-Corative Perimeter Intrusion Detection System
3. D-Pressure Strip Intrusion Detection System
4. D-Deck Intrusion Detection System
5. D-Step Intrusion Detection System
6. Electronic Welded Mesh Perimeter Intrusion Detection System
7. D-Bolt Security System
8. Computerized Control Center

Resorts & Hotels

Sea Ports

The Sea Ports were declared by the American Authorities, as well as many other authorities in the world, as strategic assets that have to comply with the most rigorous security requirements with the highest standards and uncompromising laws. D-Fence has developed an ultimate protection package according to these requirements and it includes security systems which have been adapted to work under the most extreme environmental conditions, harsh weather, salty environments and noise.

Systems for Sea Ports:

1. D-Taut Wire Perimeter Intrusion Detection System
2. D-Corative Perimeter Intrusion Detection System
3. D-Pressure Strip Intrusion Detection System
4. DF-2100 Electronic Concertina Security System
5. Electronic Field Fence Perimeter Intrusion Detection System
6. Electronic Welded Mesh Perimeter Intrusion Detection System
7. D-Ground Security System
8. D-Bolt Security System
9. Computerized Control Center

Ship & Yacht Security

The increasing threats around the world of takeovers and kidnappings of merchant ships, tankers and even yachts, led D-Fence to design and develop security systems for maritime transportation means. The systems are tailored for each one of these means according to the level of risk and threat determined for each particular one.

Systems for Ship and Yacht Security:

1. D-Taut Wire Perimeter Intrusion Detection System
2. D-Pressure Strip Intrusion Detection System
3. D-Deck Intrusion Detection System
4. D-Step Intrusion Detection System
5. DF-2100 Electronic Concertina Security System
6. Electronic Field Fence Perimeter Intrusion Detection System
7. D-Bolt Security System
8. Computerized Control Center

Stadiums & Sport Venues

The need to protect the privacy and to ensure the security of the players and club members, both the personal security and the security of their private belongings, gave rise to the need to develop Open-Design type systems that must fit and integrate with the surroundings and must provide a sense of security. For this purpose, D-Fence has developed the "Sport Security", that includes a variety of systems to be used by the Security Officers and also by the building and landscape architects of the venues. The systems can be installed on already existing systems on the field, and can also be programmed for new installations and venues.

Systems for Stadiums & Sport Venues:

1. D-Taut Wire Perimeter Intrusion Detection System
2. D-Corative Perimeter Intrusion Detection System
3. D-Pressure Strip Intrusion Detection System
4. D-Deck Intrusion Detection System
5. D-Step Intrusion Detection System
6. Electronic Field Fence Perimeter Intrusion Detection System
7. Electronic Welded Mesh Perimeter Intrusion Detection System
8. D-Bolt Security System
9. Computerized Control Center

Train Stations & Railroads

The worldwide train industry, both passenger and cargo, is developing to monumental proportions in the aspects of technology, speed and crossing of borders, even between continents. The increasing threats to stations and terminals, terror threats, vandalism and theft require creative solutions inside the trains themselves and also on the infrastructure, including the railroads and require from the security forces to provide functional solutions for maximum protection. The systems developed by D-Fence, which can be installed along the rails and that can withstand the most harsh environmental conditions, as well as the walls and fences alongside the rails, are immune to vibrations and don't generate false alarms because of shock waves, speed or vibrations. D-fence has also developed decorative and aesthetic detection systems for the terminals and convenience areas, that perfectly integrate with the architectural design of the station of terminal.

Systems for Resorts and Hotels:

1. D-Taut Wire Perimeter Intrusion Detection System
2. D-Corative Perimeter Intrusion Detection System
3. D-Pressure Strip Intrusion Detection System
4. D-Deck Intrusion Detection System
5. D-Step Intrusion Detection System
6. Electronic Field Fence Perimeter Intrusion Detection System
7. DF-2100 Electronic Razor Wire Concertina
8. Electronic Welded Mesh Perimeter Intrusion Detection System
9. D-Bolt Security System
10. D-Ground Perimeter Intrusion Detection System
11. Computerized Control Center

Universities, Colleges, & Schools

D-Fence has worked very hard on the development of perimeter protection systems adapted to a wide range of educational institutes, universities and schools. D-Fence's methodology is based on preventing the intrusion of unauthorized persons to the area of the educational institution, by means of green and safe systems (D-Fence's Green Security Revolution) that are meant to replace the old generation of security systems, don't generate radiation, and are harmless to the students (unlike barbed wires, razor wires or broken glass).

D-Fence has developed an integral perimeter system with Open Design that works 24/7, and that can be integrated with existing or new CCTV systems, Control Center, the gates and any other existing systems, while blending perfectly with the surroundings and the environment where they are installed. The integration and combination of the unique technology will provide the several types of educational institutes, as well as to the architects and/or security officers the possibility of a very high level of control and supervision regarding both in terms of functionality and in terms of price.

The systems presented below can be upgraded or re-designed based on the existing blueprints and diagrams.

Systems for Universities, Colleges, Schools and other Educational Institutes:

1. D-Taut Wire Perimeter Intrusion Detection System
2. D-Corative Perimeter Intrusion Detection System
3. D-Pressure Strip Perimeter Intrusion Detection System
4. D-Deck Intrusion Detection System
5. D-Step Intrusion Detection System
6. Electronic Field Fence Perimeter Intrusion Detection System
7. Electronic Welded Mesh Perimeter Intrusion Detection System
8. D-Bolt Security System
9. D-Ground Perimeter Intrusion Detection System
10. Computerized Control Center

Water Protection

In the last years, Water Resources have become a priceless commodity, a fact that has required us to develop unique protection and security systems for them, D-Fence's Water Security, which includes security and supervision for all types of water installations like reservoirs, treatment plants, hydrologic stations, dams, pumps and support equipment. The systems we are talking about have been successfully tested in tens of sensitive installations and have proven their efficiency against sabotage, criminal acts and terrorism. The systems are made from materials that withstand the most extreme environmental conditions including extreme weather conditions, high humidity, high salinity, moisture, etc.

The systems presented below can be installed independently or can be combined into existing security means and systems and can also integrate with additional existing and new systems by way of a sophisticated control system that, in combination with D-Fence's unique sensors, create a safe and secure system that provides protection to the wide range of water installations.

Systems for Water Security

1. D-Taut Wire Perimeter Intrusion Detection System
2. Electronic Field Fence Perimeter Intrusion Detection System
3. DF-2100 Electronic Razor Wire Concertina
4. Electronic Welded Mesh Perimeter Intrusion Detection System
5. D-Bolt Security System
6. D-Ground Perimeter Intrusion Detection System
7. Computerized Control Center
